European Technical Assessment

ETA-09/0140 of 17/05/2019

General Part

Technical Assessment Body issuing the European Technical Assessment	Instytut Techniki Budowlanej
Trade name of the construction product	BOSSONG BCR V PLUS, BOSSONG BCR V PLUS-W and BOSSONG BCR V PLUS-T
Product family to which the construction product belongs	Bonded fasteners for use in concrete
Manufacturer	BOSSONG S.p.A. Via Enrico Fermi, 49/51, IT-24050 Grassobbio (Bg), Italy www.bossong.com
Manufacturing plant	BOSSONG S.p.A. Via Enrico Fermi, 49/51, IT-24050 Grassobbio (Bg), Italy
This European Technical Assessment contains	29 pages including 3 Annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of	European Assessment Document EAD 330499-01-0601 „Bonded fasteners for use in concrete”
This version replaces	ETA-09/0140 issued on 25/02/2014

Specific Part

1 Technical description of the product

The BOSSONG BCR V PLUS, BOSSONG BCR V PLUS-W and BOSSONG BCR V PLUS-T are bonded fasteners (injection type) consisting of an injection mortar cartridge using an applicator gun equipped with a special mixing nozzle and steel element: commercial threaded rod of the sizes M8 to M30 with hexagon nut and washer or reinforcing bar (rebar) from Ø8 to Ø32 mm.
The steel element is placed into a drilled hole previously injected (using an applicator gun) with a mortar with a slow and slight twisting motion. The steel element is anchored by the bond between steel element, mortar and concrete.

An illustration and the description of the products are given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The performances given in clause 3 are only valid if the anchors are used in compliance with the specifications and conditions given in Annex B.

The performances given in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Performance of the product

3.1.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load and shear load (static and quasi static loading), displacements	See Annex C1 to C7
Characteristic resistance for seismic performance category C1	See Annex C8
Characteristic resistance for seismic performance category C2	See Annex C9

3.1.2 Hygiene, health and the environment (BWR 3)

No performance assessed.

3.2 Methods used for the assessment

The assessment of the product has been made in accordance with the EAD 330499-01-0601 „Bonded fasteners for use in concrete”.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision 96/582/EC of the European Commission the system 1 of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) applies.

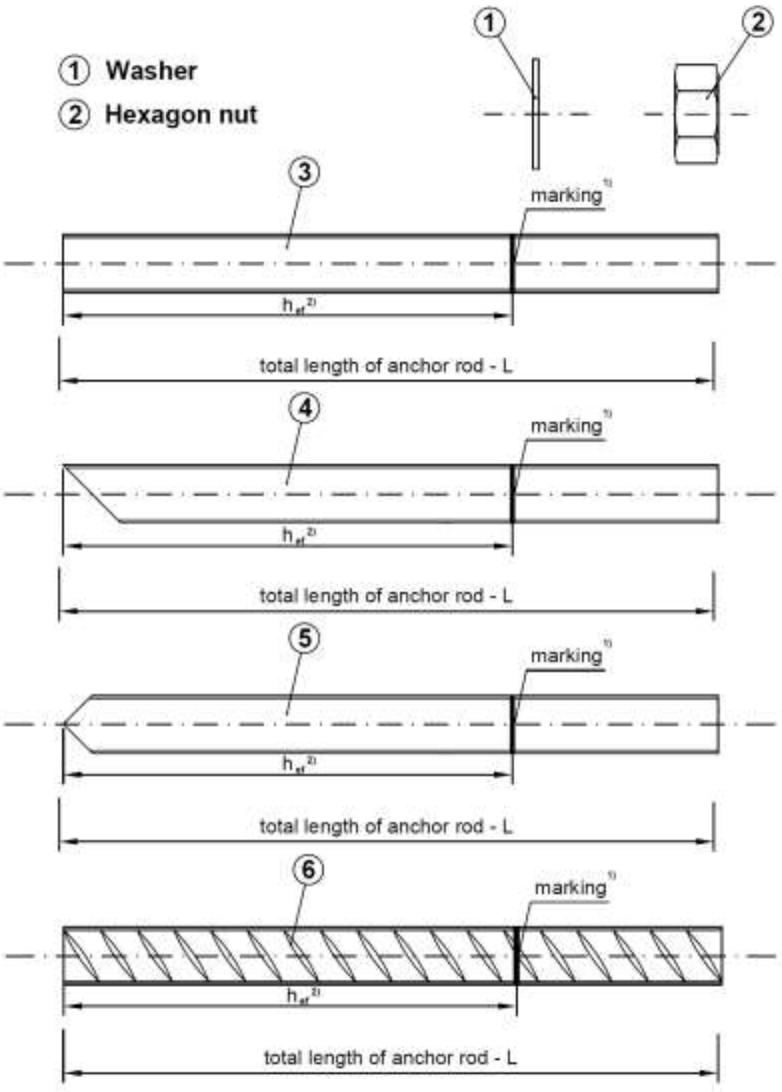
5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document (EAD)

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Instytut Techniki Budowlanej.

For type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

Issued in Warsaw on 17/05/2019 by Instytut Techniki Budowlanej

Krzysztof Kuczński, PhD
Deputy Director of ITB



3 Version 1 - rod with flat end with marking on h_{ef}
4 Version 2 - rod with 45° cutted end with marking on h_{ef}
5 Version 3 - rod with V shape end with marking on h_{ef}
6 Rebar - Deformed reinforcing bar with marking on h_{ef}

1) Marking according to clause 1.1 of EAD 330499-01-0601
2) Effective anchorage depth according to Table B1 and B2 (Annex B2 and B3)

[1)] For seismic performance category C1 and C2, $A_5 > 19\%$

Commercial standard threaded rods may be used, with:

- material and mechanical properties according to Table A3,
- confirmation of material and mechanical properties by inspection certificate 3.1 according to EN-10204:2004,
- marking of the threaded rod with the embedment depth.

Note: Commercial standard threaded rods made of galvanized steel with property class above 8.8 are not permitted in some Member States.

Table A2: Reinforcing bars (Rebar)

Designation	Material
Rebar according to EN 1992-1-1:2004+AC:2010	Bars and de-coiled rods Class B or C With f_{yk} and k according to EN 1992-1-1:2004+AC:2010 $f_{uk} = f_{tk} = k \times f_{yk}$ Rib height of the bar (h) in the range 0,05d ≤ h ≤ 0,07d

Product description Cartridge types and sizes	

Specifications of intended use

Use:

The anchors are intended to be used for anchorages for which requirements for mechanical resistance and stability and safety in use in the sense of the Basic Requirement 1 (EU) 305/2011 shall be fulfilled and failure of anchorages made with these products would compromise the stability of the works, cause risk to human life and/or lead to considerable economic consequences.

Anchors subject to:

Static and quasi-static loads: sizes from M8 to M30 and from Ø8 to Ø32.

Seismic performance category C1: sizes from M12 to M20, rods with $f_{uk} \leq 800$ N/mm^2 and fracture elongation $A_5 \geq 19\%$.

Seismic performance category C2: sizes M12 and M16, rods with $f_{uk} \leq 800$ N/mm^2 and fracture elongation $A_5 \geq 19\%$.

Base material:

- Reinforced or unreinforced normal weight concrete of strength class C20/25 at minimum to C50/60 at maximum according to EN 206-1206-1:2013+A1:2016.
- Non-cracked concrete: sizes from M8 to M30 and from Ø8 to Ø32.
- Cracked concrete: sizes from M10 to M20.

Temperature range:

The anchors may be used in the following temperature range:

- -40°C to +40°C (max. short term temperature +40°C and max. long term temperature +24°C).
- -40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C).
- -40°C to +120°C (max. short term temperature +120°C and max. long term temperature +72°C).

Use conditions (environmental conditions):

- X1: Structures subject to dry internal conditions: Elements made of galvanized steel (zinc plated or hot dip galvanized) and stainless steel A2, A4 or high corrosion resistance steel (HCR).
- X2: Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Elements made of stainless steel A4 or high corrosion resistance steel (HCR).
- X3: Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if other particular aggressive conditions exist. Such particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used): Elements made of high corrosion resistant steel (HCR).

Installation:

- Dry or wet concrete (use category I1): sizes from M8 to M30 and from Ø8 to Ø32.
- Flooded holes with the exception of seawater (use category I2): sizes from M8 to M30 and from Ø8 to Ø32.
- Installation direction D3 (downward and horizontal and upwards installation): sizes from M8 to M30 and from Ø8 to Ø32.
- The anchors are suitable for hammer drilled holes (HD), for hollow drill bit (HDB) and for compressed air drill (CA): sizes from M8 to M30 and from Ø8 to Ø32.

Design methods:

- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Anchorages under static or quasi-static loads are designed in accordance to EN 1992-4:2018 and Technical Report TR 055.
- Anchorages under seismic actions are designed in accordance to EN 1992-4:2018 and Technical Report TR 045.

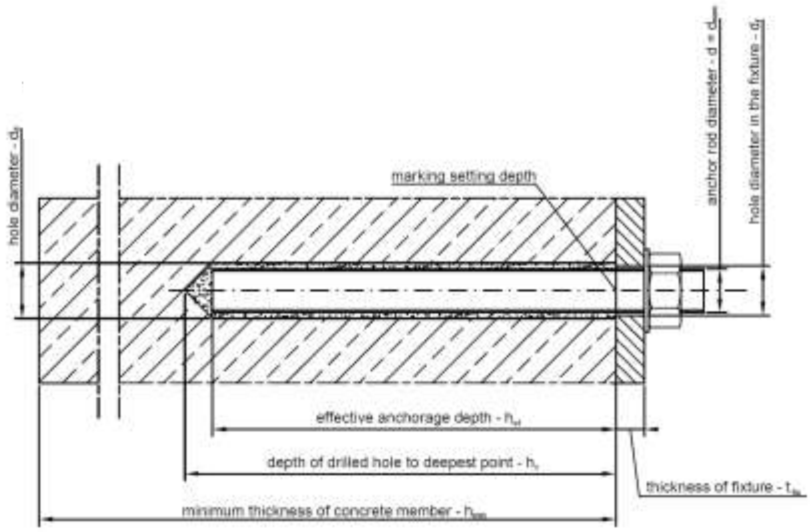

Table B1: Installation data for threaded rods

Size		M8	M10	M12	M16	M20	M24	M27	M30

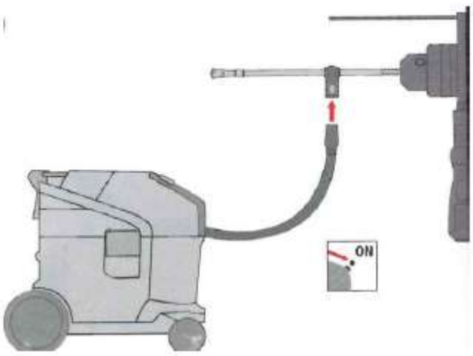
Hollow Drill Bit (HDB)

This drilling method is a hammer drilling method.

This drilling system removes the dust and cleans the bore hole during the drilling operation when used in accordance with the user's manual.

This drilling system include a vacuum cleaner. A suitable dust extraction system must be used.
e.g. Bosch GAS 35 M AFC or a comparable dust extraction system with equivalent performance data.



Switch-on the vacuum cleaner before to drill

Table B8: HDB perforation diameter for threaded rods

Threaded rod diameter		M8	M10	M12	M16	M20	M24	M27	M30

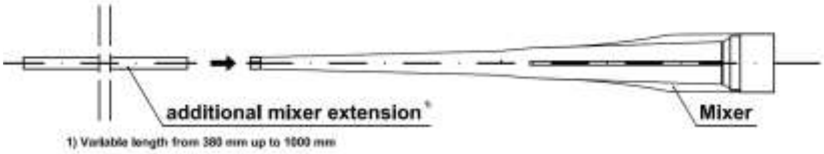
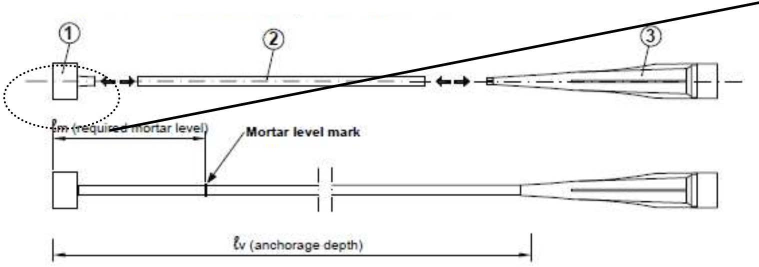
[1)] Each of two given values can be used

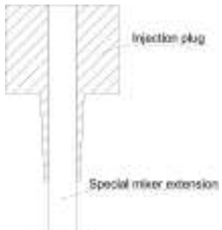
<u>Use the mixer extension (assembled on the standard mixer) for the injection up to 300 mm if necessary.</u>



<u>Use this system for special conditions.</u>



Insert the special mixer extension in the inner diameter of the injection plug up to reach the top of the plug



① Injection plug (nominal diameter according to the nominal diameter of drilled hole)

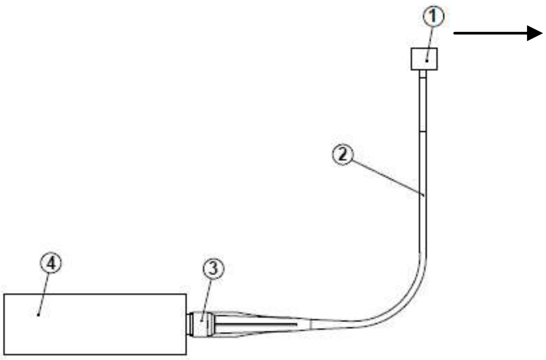
② Special mixer extension (variable length with external diameter 10 mm)
Mark the required mortar level ℓ_m and embedment depth ℓ_v with tape or marker on the injection extension. Quick estimation: $\ell_m = 1/3 \cdot \ell_v$
Continue injection until the mortar level mark ℓ_m becomes visible.

③ Mixer (suitable for all size of cartridge)

These tools allow the application in special conditions:
- installation with anchorage depth greater than 300 mm;
- overhead installation.
For these applications it is recommanded the use of pneumatic or battery dispenser.

System assembled

① Injection plug
② Special mixer extension
③ Mixer
④ Cartridge
⑤ Sample of dispenser



BOSSONG BCR V PLUS, BOSSONG BCR V PLUS-W and BOSSONG BCR V PLUS-T	**Annex B8** of European Technical Assessment ETA-09/0140

Table B10: Mortar injection pumps

Pumps (injection dispensers)	Cartridges	Types
 *Manual*	420 ml 400 ml 380 ml	Manual (up to 300 mm anchorage depth)
 *Manual*	345 ml 300 ml 280 ml 165 ml	Manual (up to 300 mm anchorage depth)
 *Manual*	300 ml 280 ml 165 ml	Manual (up to 300 mm anchorage depth)
 *Pneumatic*	825 ml	Pneumatic (up to 640 mm anchorage depth)
 *Pneumatic*	420 ml 400 ml 380 ml	Pneumatic (up to 640 mm anchorage depth)
 *Battery*	420 ml 400 ml 380 ml 345 ml 300 ml	Battery (up to 640 mm anchorage depth)

1		Drill the hole with the correct diameter and depth using a rotary percussive machine. Check the perpendicularity of the hole during the drilling operation. **In case of use of hollow drill bit (Annex B7) proceed directly to the clause 3.**
2	 **4x blower manual pump**  **4x standard brush**  **4x blower manual pump** **if necessary use a mixer extension for the blower operation (see Annex B5)**	Clean the hole from drilling dust: the hole shall be cleaned by at least 4 blowing operations, by at least 4 brushing operations followed again by at least 4 blowing operations; before brushing clean the brush and check (see Annex B6, standard brush) if the brush diameter is sufficient. For the blower tools see Annex B5.
3		For coaxial, peeler and side by side cartridges unscrew the front cup, screw on the mixer and insert the cartridge into the gun. For CIC sizes, unscrew the front cup, pull-out the steel closing clip according to the following operation: 1) Insert the mixer in the eye of the plastic extractor; 2) Pull the extractor to unhook the steel closing clip of the foil. In the version without the extractor cut the foil pack. After that screw on the mixer and insert the cartridge in the gun.
4		Before starting to use the cartridge, eject a first part of the product, being sure that the two components are completely mixed. The complete mixing is reached only after that the product, obtained by mixing the two components, comes out from the mixer with a uniform colour.
5	 **if necessary, use a mixer extension for the injection (see Annex B8)**	Fill the drilled hole uniformly starting from the drilled hole bottom, in order to avoid entrapment of the air; remove the mixer slowly bit by bit during pressing-out; filling the drill hole with a quantity of the injection mortar corresponding to 2/3 of the drill hole depth.
6	 **ATTENTION: Steel elements dry and free oil and other contaminants**	Insert immediately the steel element (threaded rod or rebar), marked according to the proper anchorage depth, slowly and with a slight twisting motion, removing excess of injection mortar around the steel element. Observe the processing time according Annex B4. Wait the curing time according Annex B4.

1	**See clause 1 Annex B10.** In case of use of hollow drill bit (HDB) proceed directly to the clause 3.	
2		Clean the hole from drilling dust: the hole shall be cleaned by at least 4 blowing operations (5 seconds for single operation) with compressed air, by at least 4 brushing operations with special brush followed again by at least 4 blowing operations (5 seconds for single operation) with compressed air. Before brushing clean the brush and check if the brush diameter is sufficient.
3	**See clause 3 Annex B10**	
4	**See clause 4 Annex B10**	
5		Before starting the injection, assemble the system according to Annex B8. After that, fill the drilled hole uniformly from the drilled hole bottom, in order to avoid entrapment of the air; remove the special mixer extension with injection plug slowly bit by bit during pressing-out; filling the drill hole with a quantity of the injection mortar corresponding to 2/3 of the drill hole depth. Procedure for overhead installation are detailed in Annex B12.
6	**See clause 6 Annex B10**	

Overhead installation procedure

In addition to standard procedure, for overhead installation, following the below procedure

	**1 - Start injection** **Inject from the bottom of the hole. Use battery or pneumatic dispenser if the anchorage depth is grater than 200 mm.**
	**2 - Injection phase** **Inject the product about 2/3 of the hole depth. Remove the mixer extension slowly bit by bit during pressing-out.**
	**3 - End injection** **Remove the mixer extension. Insert immediately the steel element (turn the steel element during the insertion).**
	**4 - End installation** **To avoid the slipping of the steel element during the open time of the product (due to the steel element own weigth) use a temporary interlocking element (for ex. wedge of wood)**
